6 Tips To Help You Clean And Care For Upholstery

x x x x

Vacuum Every Week

Vacuuming is a must for general maintenance of upholstery. Periodically take your vacuum cleaner to remove the surface dirt and soil from the furniture.

Keep Your Upholstery Protected

You can take some simple measures to keep your upholstery from becoming easily stained! So, don't be afraid to look into water repellents or fabric protectors.

Know Your Fabrics

Each fabric has different needs when it comes to cleaning. Before you start washing your upholstery, check the tag for the manufacturer's care instructions.

Switch The Cushions

Keeping your cushions looking nice is only a matter of turning them and fluffing them occasionally—you can also switch their places if some get more usage than others.

Avoid Direct Sunlight

Fabric can be easily damaged when exposed to some elements, such as direct sunlight or smoke, so it's best to avoid these whenever possible.

Spot-Clean The Fabric

Accidents can be impossible to avoid altogether. When a spill happens, spot-clean the fabric as quick as you can to prevent it from soaking in the liquid.
